

Registered reading

Kairos

P+ • Conditional

Power names the leading explanatory lens; the plus sign marks applying advantage; Conditional names the result’s order-and-justice posture.

Realism leads this Foundation read

The lead is clearer within the current item set. Critical political economy remains the nearest alternative. This is a model result. It does not establish a durable trait.

Your first read of a case

Power and rivalry take priority when declared intentions lack credible constraints.

The unresolved question

You treat rivalry as a durable constraint. The unresolved question is when verification or shared costs can still contain it.

Chapter 01

Why Realism rather than Critical political economy

The political-economy challenge is that hierarchy and dependence may be doing more work than diplomacy admits. The comparison shows the authored expectations on the dimensions where these readings disagree most and your raw scale position on each dimension.

Nearest modeled alternative			
DIMENSION	REALISM	CRITICAL POLITICAL ECONOMY	YOU
Security rivalry Reassurance — Rivalry	Expects high	Expects low	6.5
Markets and dependence Security and diplomacy — Markets and dependence	No strong expectation	Expects high	4.3
Domestic politics System pressure — Domestic politics	No strong expectation	Expects high	4.0

Chapter 02

The exact terms in the family comparison

Each row is one term in the live scorer's Realismminus Critical political economycomparison. A positive term adds to the first reading's score relative to the second. A negative term subtracts from it.

This calculation uses the calibration registered for the exact completed form. It does not treat distance from the raw scale midpoint as classification evidence.

Realism minus Critical political economy

Security rivalry		+2.056
Order and justice		-0.349
Restraint and advantage		+0.319
Identity and legitimacy		+0.277
Institutions and rules		-0.223
Markets and dependence		-0.124
Domestic politics		+0.000

Positive terms count toward Realism; negative terms count toward Critical political economy. Values are shown to three decimal places. The deterministic test also reconciles the scorer's final two-decimal rounding step.

Chapter 03

Where this reading sits in the registered matrix

The Foundation registers eight reference readings across four modeled traditions and two restraint postures. The highlighted cells show the leading family and its nearest alternative at the posture resolved from this result.

The matrix is a reference system. It does not rank people or assign a population category.

Eight registered Foundation readings

Posture	Power	Rules	Meaning	Structure
Applying advantage	P+Kairos	R+Grotian	M+Satyagraha	S+Dirigisme
Restraint	P-Shi (勢)	R-Concert	M-Musyawaharah	S-Dependencia

Chapter 04

The submitted choices that can be shown here

A result generated in this browser can keep up to three derived evidence records from the exact submitted answer set. The result URL does not contain those records or the underlying answers.

Shared, legacy, deleted, and tuple-mismatched records remain unavailable. The page does not reconstruct evidence from the dimension scores alone.

Local decisive-choice evidence

LOCAL RESULT EVIDENCE

Exact local evidence is unavailable

This page has no local completion binding. Shared links carry the result, but they do not carry answers or evidence records.

Chapter 05

Domain inventories remain separate records

Security, Technology, and AI Governance ask narrower questions on their own scales. A similar label or number does not create a reviewed relationship with this Foundation result.

Records saved on this device

Security No saved Security record is available on this device. Open Security	Technology No saved Technology record is available on this device. Open Technology	AI Governance No saved AI Governance record is available on this device. Open AI Governance
---	---	--

The cards report only what is saved on this device. Profile keeps completed domain inventories beside the Foundation without averaging them into a master score.

Chapter 06

Test the reading against a reviewed case

A case can reveal which consideration takes priority when the baseline leaves a tension unresolved. The evidence window and rival interpretation remain part of the case record. This is a pressure test for the reading. The case does not prove that the registered name is a lasting identity.

Reviewed historical case

Arms-control verification

INF Treaty Verification Regime

When a verified arms-control regime later collapses, does that show that institutions failed, or that they worked only while the political bargain held?

The case separates faith in verification from faith that rules can survive a deeper strategic break.

Read the case record

Chapter 07

The limits stay attached to the result

This inventory compares answers with four authored tradition profiles. It makes no reliability, validity, or population claim, and it does not establish a durable personal trait. The public method describes the Foundation robustness diagnostic, including its constructed inputs and greater sensitivity near family and blend boundaries. The repository carries the exact methods and diagnostic data. Read the Foundation method and limits

What this model covers

Modeled here	Realist, institutionalist, constructivist, and critical political economy reference profiles.
Under-modeled	Feminist, postcolonial and decolonial, green, and English School approaches are not named as scored families.
Diagnostic status	Structural sensitivity was tested with constructed inputs. No human participant or population inference follows from that diagnostic.
Raw posture scale	The registered restraint boundary is not a claim that the completed form is symmetrically centered around that raw value.

Continue from this result

Open the next record or read the comparison more closely.

The extended set adds more item evidence to the provisional core reading.
