Kairos–Grotian

An initial Foundation read: Realism and Institutionalism

The rivalry score alone does not establish whether cooperation can change the relationship. The strategic position leaves the boundary between applying pressure and setting limits unresolved. The normative position leaves the threshold for overriding established order unresolved.

Answer 5 targeted items

Both readings remain live in the current item set. The registered reading summarizes the model output while targeted follow-up items test the boundary between them.

An arms-control bargain under pressure

Suppose two rivals offer reciprocal inspections at declared facilities. Undeclared sites remain possible, and compliance requires a real concession from each side.

The scores do not establish a dominant explanation here. One live argument is that inspections change incentives; another is that they work only while the strategic bargain holds. The strategic score does not settle how hard to press for better terms.

The strongest objection

A middle score may combine opposing answers. It cannot show that both arguments would receive equal weight in this case.

What would change the argument. The argument changes if inspections reveal violations soon enough to matter, or if the concession materially changes one side's ability to coerce the other.

An illustrative application of the reasoning. This is not a recorded answer or a prediction.

The next question. Would you accept verified limits at declared sites if neither side could rule out undeclared facilities? Which concession would make you refuse?

▶ Reading code and form

Realism and Institutionalism

A concrete case should reveal which consideration outranks the others. The rows below put your positions beside what each reading expects.

Nearest modeled alternative

DIMENSION	REALISM	INSTITUTIONALISM	YOU
Security rivalry Reassurance — Rivalry	Rivalry	Reassurance	4.0
Institutions and rules Power first — Rules bind	Power first	Rules bind	4.0
Order and justice Justice can override — Order first	Order first	Justice can override	4.0

These are authored model emphases, not measured expectations about people.

What did the work

These dimension terms give neither reading an advantage.

Each row shows how far one dimension pulled toward one reading or the other.

▶ How this is calculated

Realism minus Institutionalism

Security rivalry	+0.000
Institutions and rules	+0.000
Domestic politics	+0.000
Identity and legitimacy	+0.000
Markets and dependence	+0.000
Restraint and advantage	+0.000
Order and justice	+0.000

Positive terms count toward Realism; negative terms count toward Institutionalism.

Where this reading sits

The matrix highlights Realism and Institutionalism under your posture, beside the readings that share it. In your result the two finished close, so the rival argument is worth reading before the name settles.

The Foundation readings

Open the orientation matrix

Posture	Power	Rules	Meaning	Structure
Applying advantage	P+ Kairos	R+ Grotian	M+ Satyagraha	S+ Dirigisme
Restraint	P− Shi (勢)	R− Concert	M− Musyawarah	S− Dependencia

Test the reading against a reviewed case

One reviewed case where two of these considerations collide. Work out which you would put first.

Reviewed historical case

Cuban Missile Crisis and escalation ceilings

Cuban Missile Crisis

Was the decisive logic in 1962 credible pressure, private reciprocity, or accepting an escalation ceiling neither side could safely cross?

The case puts leverage, bargaining, and restraint inside the same decision instead of testing them in isolation.

Read the case record

What this model can and cannot say

Your answers were compared with four authored tradition profiles. It is a reading of those answers, not a measurement of proven accuracy, and not a personal trait. Readings near a boundary between traditions move more easily than others.

Read the Foundation method and limits

What this model covers	
Modeled here	Realist, institutionalist, constructivist, and critical political economy reference profiles.
Under-modeled	Feminist, postcolonial and decolonial, green, and English School approaches are not named as scored families.
Diagnostic status	Structural sensitivity was tested with constructed inputs. No human participant or population inference follows from that diagnostic.
Raw posture scale	The registered restraint boundary is not a claim that the completed form is symmetrically centered around that raw value.
